

MASTER LASER DENTISTRY

Practical Indications for Use with the Most Versatile Devices

2 Day Hands-on Dental Laser Seminar

“

Dr Dariush Radman

Drawing inspiration from renowned experts such as Carl E. Misch and John B. Suzuki, Dr. Radman honed his expertise in implantology and peri implantitis treatment, distinguishing himself as a Fellow of the International Congress of Oral Implantologists (ICOI). Additionally, his proficiency in laser dentistry was refined through specialized training under the guidance of Dr. Robert Convissar, culminating in his recognition as a Diplomate by the American Board of Laser Surgery.

Throughout his career, Dr. Radman has successfully placed and loaded thousands of implants from various leading brands. His dedication to excellence is evidenced by the hundreds of documented laser-assisted procedures he has conducted across all disciplines of dentistry particularly in implantology.

Today, Dr. Radman has a thriving private practice in North York, ON, where he concentrates on laser-assisted surgeries, implantology and is committed to delivering superior patient care and staying at the forefront of innovation.

Course Description

Learn how to significantly enhance your patient care and profitably grow your practice with laser assisted surgical techniques. From minimally invasive frenectomies to periimplantitis treatments, this comprehensive yet intuitive program will teach you the fundamental and advanced skills required to perform multiple minimally invasive treatments on your existing patients and the new ones you attract to your practice.

Beyond the benefits of learning cutting edge skills with state of the art laser technology, this informative seminar will provide a deep understanding of the justification for investing in dental laser technology. By integrating multiple new laser assisted procedures into your practice, you can unlock the potential of a significant return on investment by referring fewer patients out of your practice.

Course Objectives

- Fundamentals of laser tissue interaction & the importance of WAVELENGTH
- Learn how lasers can save time, reduce stress & make difficult cases easier, such as;
 - implant site preparation
 - second stage recovery
 - labial & lingual frenectomies
 - gingivectomy/gingivoplasty
 - excisional biopsy/fibroma
 - soft tissue crown lengthening for aesthetic & restorative
 - vestibuloplasty
 - extraction site disinfection for immediate implants
 - excision and drainage of abscess
 - **PLUS INNOVATIONS** including non-invasive fractional laser treatments for airway & facial aesthetics
